

# Analizo: an Extensible Multi-Language Source Code Analysis and Visualization Toolkit

**Antonio Terceiro, Joenio Costa, João Miranda,  
Paulo Meirelles, Luiz Romário Rios, Lucianna Almeida,  
Christina Chavez, Fabio Kon**

# Introduction

Measurement requires tools

Multiple languages

I write  
Java™  
& I'm NOT  
wearing  
Pants

A photograph of a man with a long, dark beard and hair, wearing a red polo shirt, standing next to a large, brown, fluffy dog mascot. The dog has large, white, bulging eyes and a wide, open mouth. The background shows an indoor setting with a red wall and some fluorescent lights.

## SUB-PROJECTS

▷ [Analizo](#)▷ [Kalibro](#)▷ [Doxyparse](#)▷ [Downarse](#)

<http://softwarelivre.org/mezuro/analizo>

A ferramenta base para o cálculo das métricas, a Analizo, já está desenvolvida. Foi escrita em Perl e usa como parser o [Downarse](#), que obtém as informações do código-fonte através de um software bastante maduro e usado pela comunidade software livre, chamado [Doxyparse](#). Um bom indício que o projeto será bem sucedido é a performance em C do SourceForge em cerca de 2008, para recentes estudos do [GSL-USP](#). Quando calcula as métricas para um único projeto leva poucos minutos. Além disso, a Analizo já está testada para avaliar código C, C++ e Java, diferentemente de outras ferramentas que
